

Smart Delivery Platform - Concept Brief

Core Idea

- 1 Platform for businesses to manage deliveries
- 2 Assign riders and track orders in real-time
- 3 Simple, scalable, cloud-based system

Business Logic

- 1 Business creates delivery order
- 2 System assigns rider (manual or auto)
- 3 Rider accepts and updates status
- 4 Customer tracks delivery
- 5 Order marked as completed

Architecture (High-Level)

- 1 Microservices-based architecture
- 2 API Gateway for routing
- 3 Separate services: User, Order, Delivery
- 4 Message Queue for async communication
- 5 Central database + optional cache

Key Cloud Concepts

- 1 Scalability (horizontal scaling)
- 2 High availability (multi-instance deployment)
- 3 Security (JWT authentication)
- 4 Asynchronous processing (queues)
- 5 Containerized deployment (Docker)

Tech Options

- 1 Frontend: React / React Native
- 2 Backend: Node.js (Express / NestJS)
- 3 Database: PostgreSQL
